Total Value of 2010 Crop Production

The total value of 2010 crop production in Idaho is estimated at \$2.88 billion, an increase of 4 percent from the 2009 total of \$2.78 billion, according to the National Agricultural Statistics Service. The increase in total value is due mostly to increases in value of all wheat and corn for grain production. Value of production for each crop is computed by multiplying the marketing year average price by the production. Included in the total value for Idaho are unpublished values for miscellaneous crops. The value of potatoes, at \$824 million, was down 4 percent from 2009. The value of all wheat, at \$672 million, and all hay, at \$619 million, was up 40 and 3 percent, respectively, from their 2009 values. The value of barley, at \$186 million, was down 26 percent from 2009.

Total value of 2010 crop production in the United States is estimated at \$192 billion, up 22 percent from 2009's \$158 billion. The 2010 potato crop is valued at \$3.49 billion, down 1 percent from the 2009 crop. The all wheat value of production was \$13.0 billion, up 22 percent from last year's crop. The barley crop is valued at \$691 million compared to \$972 million for the 2009 crop.
